

Taylor McKinney

SOFTWARE ENGINEER

About Me

I'm a seasoned senior software engineer, with experience delivering displays that get viewed hundreds of millions of times per day around the world, and with creating the infrastructure to support it. I'm fluent in both Japanese and client-speak, able to communicate with devs, support associates, and clients with ease. I'm always looking forward to building the next big thing, and take pride in ensuring client satisfaction.

PROFESSIONAL EXPERIENCE

06/2023 ~ Now Senior Software Engineer - Full Stack

REVCMM INC.

📍 JAPAN

- Built an application to manage the authentication and management of users, including clients, their users, and of Revcomm's internal users.
- Implemented automated systems to prevent vulnerabilities, such as leaking passwords or tokens.
- Created template system which enables non-engineers to customize the login page.
- Led programmer training courses. These were meetings where I walked other developers through the creation of critical tools, such as an HTTP server, Redis, and SQLite, with an emphasis on understanding the tools' internals.

05/2022 ~ 05/2023 Senior Software Engineer - Front End

SMARTNEWS

📍 TOKYO, JAPAN

- Developed a Webview component for a mobile app that could be used to display news stories and a variety of additional content that could not be handled by the native components.
- Developed a WYSIWYG editor that non-technical employees could use to create a variety of content, such as pages displaying news related to a specific event, or new visual data components. While primarily a React application, it also supported components vanilla web components and Svelte components.
- Developed internal web portal for Advertising clients to manage their ads, ad groups, and campaigns.

08/2020 ~ 05/2022 Senior Software Engineer - Front End

AXA LIFE

📍 TOKYO, JAPAN

- Designed the architecture for a multitude of applications and tools as requested by teams throughout the company. In addition to the architecture, I created the initial prototypes for most of these projects.
- Developed tool to send customers automated updates on their claims via SMS.
- Developed internal URL shortening service to create URLs that fit in an SMS message.
- Developed an internal API authentication tool that allowed teams to secure any APIs we created in a one-size-fits-all manner.
- Created a web portal for employees to manage sales representative contracts, as well as project the expected payment for contracted sales reps out to six months.
- Led the JavaScript Community of Practices. Hosted weekly meetups for developers to discuss the latest changes in JavaScript, new tools, and company-wide best practices.
- Held training sessions on topics related to front-end development, including Next.js, internationalization, accessibility, and Redux.

05/2019 ~ 02/2020 Systems Software Engineer - Full Stack

NETSMILE, INC.

📍 TOKYO, JAPAN

- Developed an API service layer and web portal for clients, which allowed users to upload photos and documents for OCR scanning

06/2013 ~ 02/2019 Software Engineer / Senior Software Engineer

BAZAARVOICE

TOKYO, JAPAN

- Developed 3rd-party application to display ratings and reviews for retail clients. Served over 400 million unique visitors per month. Built using a combination of Backbone and jQuery, with strict requirements for performance and user experience.
- Revamped accessibility support to meet the WCAG 2.0 standard.
- Redesigned the build system for the application to scale better with growing client and site numbers.
- Build time was reduced from hours to under 10 minutes.
- Led the Client Satisfaction team. Developed new company processes to quickly triage tickets and route them to the appropriate teams. Developed runbooks for common issues and trained support teams to resolve issues independently.
- Debugged client code on live sites and worked directly with clients to resolve urgent issues.
- Worked on the Incubator team, which built prototype applications meant to supplement the primary Ratings & Reviews application. Prototyped multiple applications that became new products, services, and internal tools.
- Trained and led international team of engineers to take over several applications.

EDUCATION

2013 Bachelor of Science in Computer Science

UNIVERSITY OF TEXAS

AUSTIN, TEXAS, UNITED STATES OF AMERICA
